

OFFLINE TRANSFERS

Connectivity
is no longer
an issue

Have you been in a container at a rural jobsite or at the basement of your warehouse and can't do anything because there is no network coverage or bad mobile signal?

Now with the ON!Track mobile app you can still work even without network coverage.

GENERAL

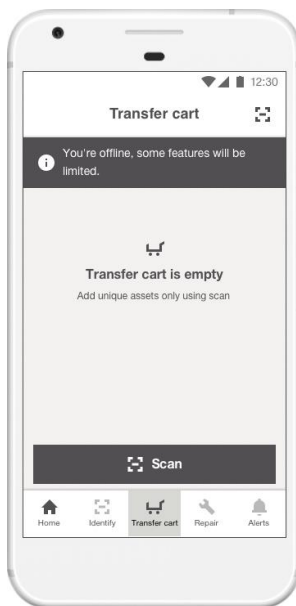

Once you are out of network coverage ON!Track mobile app will let you know via a notification on the transfer cart page.

You can still collect the scan codes using the app and then complete the transfer once your mobile has signal again.

When you get mobile signal the system will automatically sync the data in your Transfer cart and

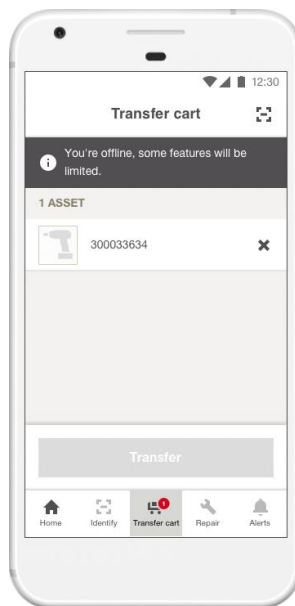

FIRST STEP

Ones offline app will let you know by adding a notification to the top of the Transfer cart screen.

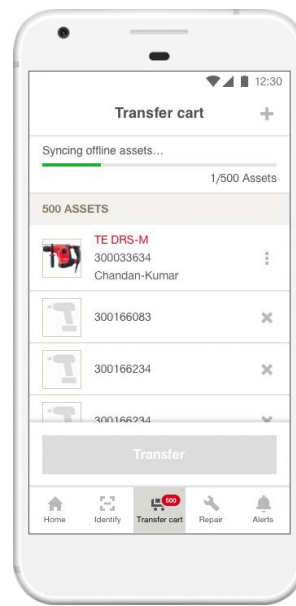

SECOND STEP

You can still scan asset scan codes to the transfer cart to act on later.

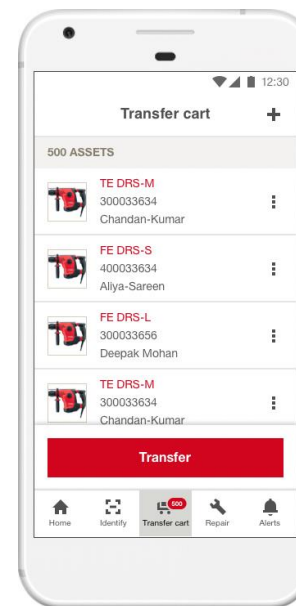

THIRD STEP

Ones back online the app performs a sync automatically collecting all the needed information from the HILTI cloud.

FOURTH STEP

After sync has completed successfully you can perform the transfer as normal.

NOTEWORTHY

You cannot initiate the transfer in case you are offline. When you get the cellular signal back system syncs the information in your transfer cart and you can complete the transfer.
